PROCEEDINGS

CHAIRPERSON CARLISLE: I know everybody is anxious to get going with the meeting of the Rural Health Policy Council.

Good morning everyone and welcome to the Tenaya Lodge. I am David Carlisle, Director of the Office of Statewide Health Planning and Development and Chair of this morning's Rural Health Policy Council public meeting.

Dr. Stephen Mayberg, Director of the Department of Managed Health, who normally chairs these meetings, had an unavoidable scheduling conflict and couldn't be with us. So I'll be chairing the meeting, and again, thank you everyone for being here.

Before we go further, of course, as everyone knows, last night marked the initiation of military action in Iraq and I'd just like to ask for a brief moment of silence in support of the U.S. troops in the mideast. Thank you.

(Brief moment of silence.)

CHAIRPERSON CARLISLE: Thank you very much everyone.

At this point, I'd like to give special thanks to Sharon Avery and the Rural Health Care Association's Rural Center Board for the invitation to have the RHPC meeting in conjunction with its 18th Annual Rural Health Care

1 Symposium.

2 Everyone today has an agenda and you will see that
3 we have a special presentation by Mr. Pablo Rosales, Deputy
4 Director of the Health Care Workforce and Community
5 Development Division of OSHPD, on developments that his
6 division is initiating in terms of the workforce area.

7 At this point I'd like to ask the members of the
8 council to go ahead and introduce themselves for the
9 audience, going from my left to the right.

10 COUNCILMEMBER MCNEIL: I'm Maureen McNeil, and I'm
11 representing Richard Watson who is Director of the Emergency
12 Medical Services Authority.

13 COUNCILMEMBER SAVIANO: Elizabeth Saviano, on
14 behalf of the Director of the Department of Health Services.

15 COUNCILMEMBER LEE: Bud Lee, the Executive
16 Director of the Rural Health Policy Council, also the Chief
17 Deputy Director at the Office of Statewide Health Planning
18 and Development.

19 COUNCILMEMBER LEIVA: Mauricio Leiva, I'm
20 representing Lesley Cummings from the Managed Risk Medical
21 Insurance Board.

22 COUNCILMEMBER LOZANO: I'm Ruben Lozano. I'm here
23 on behalf of Dr. Mayberg who is the Director of the
24 Department of Mental Health.

25 CHAIRPERSON CARLISLE: And now before Bud Lee

1 gives his activities update, I'd like to also point out that
2 we have a public comment period. And in order to make
3 comments, we'd like to ask you to fill out these cards that
4 are available either from folks in the back of the room or
5 the back table. If you have a card, you can raise your hand
6 and Kerri Muraki or Raquel Lothridge at the back will take
7 them for you, and we can go ahead and put them on the agenda
8 for the public comment period.

9 Well, at this point, Bud will make his activities
10 update.

11 COUNCILMEMBER LEE: Good morning everybody, it's
12 always a pleasure to come to this symposium. Tenaya Lodge
13 is a great place to get together.

14 I wish I had something more definitive to tell you
15 about the State budget. I know that that is something that
16 is weighing very heavily on everyone's mind, and in
17 particular, issues related to the county realignment. Just
18 to bring you up to date in terms of the process and where we
19 are, there are budget hearings that are going on now. They
20 are largely informational where people are testifying about
21 the potential impacts of the proposed county realignment
22 functions in both health services as well as social
23 services. No decisions will be made on those until after
24 about May 15th. For those of you who are familiar with the
25 state budget process, it's affectionately known as the May

1 Revise where all the caseload and workload estimates are
2 used to update the proposed budget that was issued in early
3 January. And it's that time then that the Legislature will
4 have more definitive numbers with which to work.

5 I think most of you have some liaisons in
6 Sacramento who monitor budget activities for you. I would
7 encourage you to stay very close to them so that your views
8 can be heard through those organizations. We're really into
9 a period of about six more weeks of intensive negotiation
10 until we know what will happen, more likely in the latter
11 part of May and during the month of June. There are other
12 issues related to the budget, I think which I included in an
13 earlier update issued a month or so ago.

14 By the way, if we ran out of copies of my most
15 recent update, which was on the back table, if you would
16 like one and you didn't get a hard copy, we're having copies
17 made and they will be available later on during this
18 meeting. And Kerri is saying they are available right now.

19 I want to bring you up to date in terms of some
20 things, some initiatives, that the Council has launched at
21 the behest of some of you, as well as some others who may
22 not be able to be here today.

23 We've adopted a working group model. I think I've
24 discussed this at various other meetings where you may have
25 attended or at last year's meeting like this. A working

1 group model where a group gets together of interested
2 parties from both the public and private sectors, and the
3 group has a lifespan of however long the group has value or
4 that the Council is contributing value to that process. For
5 example, there is a working group that is moving ahead
6 addressing specifically rural healthcare workforce issues.
7 We're having a meeting on March 27th. We've had a couple of
8 early meetings, they've been kind of formation oriented,
9 figuring out what it is that we want to try to tackle.

10 A couple of things are coming down the pipe in
11 kind of the near and then longer-term orientation. In the
12 near-term orientation, we've picked up on the fact that
13 there are some communities where for workforce development,
14 healthcare workforce development, you can grow your own.
15 And the intent here is with the knowledge that there are
16 people who may come to your community to serve in the rural
17 workforce because they are incentivized to do so by some
18 grant or loan repayment mechanism, but they will often leave
19 after that obligation is done.

20 And in order to have kind of long-term retention
21 within a community, we need to figure out ways to educate
22 people in that community, options such as distance learning
23 through telehealth networks and those types of things are
24 going to be on our agenda. A little longer term, because it
25 involves perhaps some political diplomacy, has to do with

1 expanding the number of mid-level practitioners. Clearly
2 there are areas where getting physicians or dentists into
3 rural communities is a very big challenge. There are
4 already existing mid-level programs that you're very
5 familiar with, the physicians assistants, the nurse
6 practitioners and others.

7 One area that seems to have surfaced as an area
8 where some good could be done would be the oral health area.
9 So we're going to be taking a look at whether we can do some
10 facilitation in terms of policy development to expand the
11 oral health mid-level practitioner capability, just to
12 extend access into more remote and rural areas.

13 That would be what I would characterize as a
14 rather large-scale working group that's going to have a
15 lifespan, I believe, of perhaps quite a few years. Because
16 once we solve one, we can move on to another. The
17 opportunities for workforce development are almost limitless
18 now, as you know.

19 Another working group that we're facilitating, I
20 would say the mid size, is the Managed Care Geographic
21 Accessibility Standards have been -- the Department of
22 Managed Health Care has been directed to reexamine and
23 evaluate the current Geographic Accessibility Standards
24 currently pegged at -- and I think people are familiar
25 enough so I can go right to the jargon, the 15- and the 30-

1 mile rule, standard, guideline, there seems to be a lot of
2 ambiguity out there as to what that exactly is. We convened
3 a group starting with the Rural Health Center Board here and
4 the Department of Managed Health Care and it is being
5 expanding to include other groups.

6 Again, in the most recent report that we issued,
7 the update, I referenced a meeting that we just had with the
8 Department of Managed Health Care Legislative Liaison, and
9 without tying him down to any specific timeframe other than
10 very soon, they are going to be launching a process that
11 they're still working out the mechanics of what it's going
12 to be. But what they're kind of thinking about is should
13 they get together with individual stakeholder groups, say
14 like the provider community, and then another group being
15 the plans and another group being consumers, should they get
16 together with them individually first to try to scope out
17 what their concerns are about these Geographic Accessibility
18 Standards and then convene everyone into a large group, this
19 is all prior to putting some regulations on the table to
20 talk about them, or should they just go for a big group and
21 have a real set to. They're thinking about that. And Herb
22 Shultz is the legislative liaison for the Department of
23 Managed Health Care and in the update I've given you his e-
24 mail address and you should feel free to share your thoughts
25 with Herb.

1 The other part of the process that they're
2 thinking through is should they come to these meetings
3 without any paper in terms of what their thinking is about
4 draft regulations. That keeps things wide open at the
5 beginning. Or should they come to a meeting with some draft
6 regulations so people have something to react to. They're
7 working through that and thoughts that you may have to
8 contribute to their thinking I know would be appreciated.

9 That's when these start evolving. I think we can
10 assume it's, you know, less than a month. I don't want to
11 bind him to a couple weeks, but it's soon, within the month,
12 I would expect. And then that's going to stimulate a
13 process that will eventually evolve into a formal regulation
14 process going through the Office of Administrative Law and
15 all that type of thing. It promises to be a very
16 challenging effort, because there are some pretty widely
17 held views on these issues.

18 The one thing that Herb Schultz asked me to pass
19 on to you is that if you want to resolve issues related to
20 contracts and payment schedules and those kinds of things,
21 they're willing to listen, but it's not part of his
22 regulation process. It would have to be in a different
23 venue, because they're trying to stay focused specifically
24 on the Geographic Accessibility Standards.

25 On a little smaller scale, but still very

1 important, for those of you who may know situations in your
2 counties where you have a county alcohol and drug treatment
3 program staffed by a variety of practitioners, both licensed
4 and certified and unlicensed, if you've had challenges in
5 working with health plans who are contracting with the
6 Healthy Families Program, we have been facilitating a
7 process to try and see if we can break down some barriers
8 that county alcohol and drug programs have had in
9 contracting with health plans that are serving the Healthy
10 Families Program. Specifically, now we're talking about
11 children under the age of 18 that are in need of alcohol and
12 drug treatment.

13 The health plans have traditionally had some
14 concern about using practitioners who aren't licensed. We
15 discovered through a long process of discussion with the
16 Department of Managed Health Care that that's not a barrier
17 and health plans don't have to contract only with licensed
18 practitioners. Other issues have surfaced that the plans
19 are concerned about, accreditation issues.

20 So we're going to have one more meeting, getting
21 all these people around the table, and we're going to see if
22 we can get to some resolution short of having to go to a
23 legislative process, because we all know how difficult and
24 challenging that can be. So hopefully by the next time we
25 get together or I issue my report, I'll be able to say,

1 well, we've found a way to work things out or we haven't and
2 it's going to be a legislative battle.

3 But those are the examples of the type of working
4 groups that we have, I think, discovered that the Council
5 can serve you well in terms of we don't bring, you know, a
6 specific agenda that we want to promote other than to make
7 sure that people like yourselves have access to tables where
8 discussions like this go on and what we can go is convene.
9 We don't come to the table with a particular agenda of our
10 own, it makes other people who need to come to that table
11 too less suspicious of us because we don't have a particular
12 ax to grind other than to represent you and get you to the
13 table.

14 So if there are other issues like what I have just
15 described, ranging from large to small or medium, that you
16 think could be helped simply by us creating a venue in
17 Sacramento or in your locale with people, agencies in the
18 state government or private sector associations, special
19 interest groups that you wouldn't normally or naturally meet
20 with, let us know. I can't promise we're going to be able
21 to solve everything, but at least we can hear you and help
22 you understand how it is that we may go about helping you.
23 Okay.

24 Other items of general news. There is the report
25 to the Legislature which you've been hearing about for a

1 number of months now. It's under review, going through the
2 process in the executive branch. I hope to have news about
3 that soon, and we did make some recommendations in there
4 that I hope that you will find helpful.

5 Also just a notice or reminder, back there on the
6 table there's a short piece also about the Small Grant
7 Program is getting ready to launch. That has not been
8 affected materially by the state budget. That's again
9 funded out of the Tobacco Tax Program. It's got a timeline.
10 April 28th is the first key date in your mind, if you're
11 thinking about wanting to submit a response to our request
12 for proposal. April 28th is our release date. So if you're
13 not on a list to receive our RFAs, please e-mail us and let
14 us know that you would like to receive one.

15 Also, just to remind you also, we do have Job
16 Lines Program. We have some materials in the back, again,
17 on the status of the job lines, the hot line, and please
18 feel free to use that. I know many of you do.

19 We also have a couple of maps back there. We have
20 some new mapping capability. You now can see all of our
21 maps. We've got the critical access hospital map, we've got
22 the designated rural hospital map.

23 And that's really about it in terms of where the
24 Council is. I'll be around for questions later on or if you
25 have any of me during the public comment period, I'd be

1 happy to address them. Thank you very much.

2 CHAIRPERSON CARLISLE: And thank you, Bud.

3 Now we will move to the next item on the agenda
4 which is a presentation by Deputy Director Pablo Rosales
5 from the Healthcare Workforce and Community Development
6 Division of OSHPD.

7 As Pablo is setting up, I'd again like to remind
8 everyone that we certainly encourage public comment. If you
9 do wish to make a public comment, fill out one of these
10 cards which are available on the back table there and
11 Jessica, Kerri or Raquel will pick it up from you and bring
12 it up to me and we'll go ahead and get you in the queue.

13 DEPUTY DIRECTOR ROSALES: Good morning everybody.
14 By a show of hands, can I please ask how many people are
15 really familiar with the operations of OSHPD?

16 Okay. When I get in trouble, I'm going to call
17 for you guys to give me some answers, okay, to help me out.

18 Yesterday morning, or actually yesterday
19 afternoon, I was sitting in my office and like a typical
20 bureaucrat trying to push some papers around and making sure
21 that I had all my work done. And I have been given this
22 real fancy computer with all the bells and whistles that you
23 can think of, and this is from somebody who still uses a
24 paper and pencil to do stuff, okay. But my supervisor, Bud,
25 pops his head in the door and says are you thinking of

1 coming to the meeting we have scheduled, and I look up and
2 realize that I have a meeting scheduled.

3 And, of course, the essence of the story is that
4 right now everybody at OSHPD is really very, very busy. I
5 mean, with the issues that we have with the budget, there's
6 been a lot of impact in terms of our operations. But I'm
7 sure I'm preaching to the choir, because there is a trickle
8 down effect. I'm sure, that most of you have less money to
9 work with, you have growing demands, you have less staff,
10 and things are not easy at this point, okay. So I just
11 wanted to share with you that everybody at OSHPD, not just
12 our division, is really cranking it up and we're really
13 working very, very hard.

14 This is the vision statement for our department,
15 "Equitable healthcare accessibility for California." They
16 are five little words, but they are five little words that
17 really make it very difficult for us to meet all the intents
18 of what we want to do for the state. I've said it publicly
19 and I will say it again, when people ask me well, how do you
20 like working for OSHPD, and I say, you know what, the only
21 trouble I have working for Dr. Carlisle and for Bud is that
22 every time we go somewhere it's that what can we do for this
23 community, which means there's more work for the division.
24 But by the same token, it's kind of hard not to enjoy that
25 kind of enthusiasm and willingness to have a department be

1 able to be more proactive in community matters.

2 I come from the community side and I truly
3 appreciate that when a state department does engage in terms
4 of whatever activities a community finds as their priority,
5 their needs, not what Sacramento and people up north think
6 you should have. So I like that kind of engagement for our
7 department, I really enjoy it.

8 By the same token, we are facing a growing aging
9 workforce. We have, what, six to eight million people that
10 aren't insured, and of special concern for me is the
11 children. We have two million plus children that aren't
12 insured. We are having competition. The healthcare area is
13 no longer where people kind of come to, they want to go out
14 and make more money in other areas that are less difficult
15 to work in. We have the issue of having to identify and
16 deal with cultural competency and enlisting these. So there
17 are a number of barriers and obstacles we're having to face
18 in order to meet the intent of our five little words here.
19 So there's a small message, but it carries a big burden on
20 us.

21 Obviously to meet your vision, you have to have a
22 mission. And I don't want to read the slides to you, but
23 just to let you know, if you'll note the bolded portion,
24 "promoting a diverse and culturally competent healthcare
25 quality," and also, "facilitating development of sustained

1 capacity for communities to address local health needs."
2 This is a very big portion of what my division does, the
3 Healthcare Workforce and Community Development Division.
4 Our emphasis is very strong on these two particular items.
5 And there's obviously more, but in order to craft a
6 reasonable mission statement, this is what we're focusing
7 on.

8 Not everybody raised their hands in terms of
9 knowing who OSHPD was and what we do. So I want to give you
10 just a thumbnail sketch, a very brief thumbnail sketch, of
11 who we are and what we do.

12 You have the Healthcare Information Division,
13 which in very simplistic terms pulls in information from the
14 public, hospitals, communities, et cetera. Then you have
15 the Healthcare Quality and Analysis Division, which churns
16 these numbers, this information and statistics and spits out
17 reports and does some very fine work by the way. Dr.
18 Carlisle and I were in a meeting down south in LA I'd say
19 about three months ago and we come to find out an
20 organization is paying a consultant to find information that
21 OSHPD has. And I think it's very disheartening because in
22 this time where money is so tight, agencies can't afford to
23 be hiring people when a state agency does this for you. So
24 we're trying to be more proactive and get the word out that
25 we are here to be a service orientated facility.

1 And, of course, we have the Facilities Division,
2 who is into the seismic safety integrity area. And, of
3 course, that's the big issue right now because hospitals are
4 having to make hard choices. Do we retrofit or do we not
5 see patients. So that's something, again, that's a real
6 burning issue. And then we have Cal-Mortgage, and Dale's
7 here today, as a matter of fact, whose division secures
8 loans so that health facilities are able to secure loans so
9 that they can either build upon or expand or develop these
10 sites. And then you have your typical Administrative
11 Division, your personnel, your accounting. And last, but
12 not least hopefully, our division, the Healthcare Workforce
13 and Community Development Division.

14 That is the basic structure of OSHPD. We are a
15 small department. We are about a \$52 million budget
16 department, less than 400 people, especially with the freeze
17 exemptions and the budget cuts, I think we've gone smaller,
18 but the work is not stopping. I don't think we're saying
19 we're not going to be able to do stuff. We have a very
20 proactive management team and I think we continue to meet
21 all our mandates in the best possible fashion that we can.

22 I also wanted to mention as an appendage to the
23 Department, and I say that with respect, is obviously the
24 Rural Health Policy Council. And then we also have the
25 Health Professions Education Foundation which provides

1 scholarships and funding for nurses. It's run under Angela
2 Smith.

3 In addition to that, we have statutory boards and
4 commissions that we respond to and deal with and interact
5 with. Of particular interest for my division is the
6 California Health Manpower Policy Commission, and we
7 respectfully refer to it as the Commission. The Commission
8 is an advisory board to the Director. The Commission is a
9 very, very -- it's a ten-person board and it's real
10 interesting, because when I first came on board, I knew
11 nothing about what they did and then I realized how
12 important their role is. In this particular case, for
13 example, they do the ranking of all the applications for the
14 Song-Brown Family Physician Training Program. They also
15 rank the family nurse practitioners and physician assistant
16 applications. So they have a real tough job, especially
17 after the funding starts to be reduced and it's harder to
18 make cuts of good programs when you know they're actually
19 good but you just can't afford to fund them. So they had
20 some real difficult decisions to make and I have seen their
21 decision making operation and I have to tell you, you talk
22 about a fair and equitable board. I am very impressed by
23 the quality of people that we have on this commission.

24 And then last, but not least, in terms of some of
25 the major functions that we do, right now some of you may or

1 may not be aware that we're in the process of reconfiguring
2 the state in terms of the HPSAs, the MSSAs, as we call them,
3 and the Commission is the body that approves recommendations
4 when we bring them forward to the committee. So again, some
5 tough items that they had to deal with, but nonetheless,
6 they've done so very professionally and I'm very impressed
7 by them.

8 So you might ask what does the Division do or how
9 do you fit into the scheme of things. Well, I've got a
10 desk, it's very old and it's very big, and we have piles of
11 stuff that we have on it. And just when I'm starting to
12 feel sorry for myself, I go to Bud's office and I look to
13 see that he's wearing two or three hats and I say I better
14 be quiet and go back to my cube, because I'm not as busy as
15 he is. But nonetheless we are very busy. Our purpose is to
16 support healthcare accessibility through the promotion of a
17 diverse and competent workforce.

18 And then the last part which I really want to
19 emphasize is providing analysis of California's healthcare
20 infrastructure. Well, obviously, that all ties into the
21 vision statement and to our mission. One of the problems
22 that I believe and I've expressed to Dr. Carlisle and to Bud
23 is that I think that our division has been remiss in terms
24 of the data collection process. I am very much a numbers
25 person and obviously you know that to run a program and to

1 validate your programs, you have to have the numbers when
2 you go forward for funding. People want to know what you
3 did for their money, whether it's the public, legislators,
4 or even other concerned citizens that really aren't
5 involved. So we've been remiss in this area, so we're
6 looking to see if the Division can be more astute in that
7 particular area.

8 For the purposes of programming, we still use a
9 straight line table of organization and development. We
10 still use the straight line, you know, who reports to who
11 and what. However, recently, because of the -- and I'll get
12 into the details more later, because of the funding
13 situation and the way it is, because we've lost six people
14 in the division through retirement or through the loss of
15 programs and funds, and I don't know about you, but six out
16 of thirty for me is a significant cut in terms of when the
17 work has not gone away, we have to redistribute the
18 workload, it's still there.

19 What we're trying to do now is rather than have
20 the staff look at the division in straight lines and charts
21 of that nature, we're asking for the staff and we're all
22 trying to keep this in mind, that there is a continuum of
23 services. In other words, there is not one program that
24 runs independently of each other. So we're trying to
25 promote an organizational operation that has this kind of

1 semblance where there is a continuation. There is no
2 beginning, there is no end, it's just a continuation of
3 services.

4 I want to run through the actual programs real
5 quickly. It's not that I want to avoid it, because all the
6 programs are very significant to us, but I don't want to
7 spend too much time on the programs themselves. So first we
8 have the National Health Service Corp/State Loan Repayment
9 Program. Obviously, as the slide reads, it's an
10 authorization to repay educational loans to bring people
11 into the HPSAs, the Health Professional Shortage Areas. It's
12 an enticement program. Obviously, we're trying to use it to
13 recruit people, and it's worked well. In fact, this year
14 it's worked too well because we received our allocation and
15 two months into the breakout of the funding, we were able to
16 distribute close to a million dollars in terms of loan
17 repayments. The commitments were made very quickly.

18 We have set aside a few dollars for the mental
19 health component, because we just added mental health to our
20 program. It was something that was not in the mix
21 previously.

22 We're also trying to do some things in this
23 program that were not done before. This program
24 historically had been a first-come first-served basis. And
25 once you got your application in, you were funded, if you

1 qualify. Well, I had two concerns with that. The first
2 concern being that if you fund in that fashion, you may
3 leave people out and there's other disciplines that are
4 involved. You know, there are a number of disciplines that
5 are involved, so some disciplines are going to be left out.
6 So we're trying to find an equitable funding distribution.
7 We may call upon some of you in the public to say, okay, if
8 you had the magic wand, how do we distribute this money
9 equitably to make sure we have coverage for mental health
10 workers, for physicians, for attendants, for nurses, et
11 cetera, et cetera. So we're trying to find that
12 distribution.

13 The other thing that concerned me is that the
14 money seemed to be distributed geographically only in
15 certain concentrations and I have a problem with that.
16 Again, having been in the community, unless you're able to
17 see the particular nuances and needs of the community, you
18 may forget about that. So I'm asking staff to look to see
19 how we can distribute the money geographically throughout
20 the state, not just in one concentrated area. So those are
21 the things we're doing there.

22 The other thing, there's two other things that are
23 on there, is that we are now in discussions with the feds
24 and we may be taking over their portion, their counterpart
25 of the Federal/State Loan Repayment Program. I'm a little

1 bit concerned, because there's quite a bit of work that's
2 going to be coming as a result of that. But by the same
3 token, I think we do need to have the programs within the
4 division. It would make it much easier for you to be able
5 to say, hey, is there money? No, I don't have money in one
6 pot, but, guess what, I may have it in another one. So we
7 are looking forward to that and I think we will be able to
8 work out the bugs and be able to get it in there.

9 Also, in addition to that, in fact I just had a
10 conversation this morning real quickly where we work very
11 closely with the Medical Board and the Dental Board and
12 they're trying to distribute their 982 money. I had a
13 conversation with Ron Joseph, the Executive Director, just a
14 couple of days ago. And my understanding is that as of two
15 days ago, there was only 17 applications for some of the
16 money, and \$3 million was available for physicians. So if
17 you guys have questions about that, I'd be glad to answer
18 them or turn you over to Ron and his group. But we work
19 very closely together, and I said to Ron, I don't want to
20 answer questions for your programs, but by the same token,
21 if I'm out in the street and I have information to share, I
22 will share it with them, and he was more than happy for us
23 to do that. We work very closely together in that area.

24 Our Song-Brown Program. I'm very impressed by
25 this program. I really like what the program does.

1 Obviously, it tries to entice and recruit people to go into
2 underserved areas, physicians, NPs and PAs. But more than
3 that, we were looking at some numbers the other day. We had
4 a legislative call and trying to look at what the program
5 does. And for year 01/02, we were looking at the fact that
6 the Song-Brown, just the residency programs provided over
7 350,000 patient contacts. That to me is significant. That
8 to me says that the program is working at this point and I'm
9 very proud of what some of the programs are doing. They
10 really put out a good product. Also the fact that the
11 figure is skewed. We get anything between 36 to 45, so I'm
12 going to use 45 to give us more credit, okay.

13 But 45 percent of the trainees under the Song-
14 Brown program end up working in underserved areas. And I
15 think, again, that's very significant since we're having to
16 not -- the story is that there's plenty of doctors, but many
17 of them don't want to work in underserved areas. This
18 program is really focusing and trying to get them into those
19 areas. And also 60 percent of the family physicians that
20 are trained annually in the state of California come out of
21 the Song-Brown Program. So it seems like in a nutshell when
22 you look at the program and the dollars we put into it,
23 we're getting a lot of bang for the buck in this program.

24 Every time we flip the chart I keep saying wow,
25 but there's something more exciting down the road, because

1 there is. This is something I'm very proud of right now,
2 the Cooperative Agreement. The staff has done a real
3 wonderful job in terms of trying to go out or, like I said
4 earlier, we're trying to reconfigure the whole state. By
5 reconfiguration, meaning that we're trying to pull some of
6 the less rural areas, less densely population rural areas
7 away from the urban areas so we can get a more appropriate
8 geographic distribution evidence in the state, which means
9 -- translates into the benefit to the community. Because
10 this will make you eligible for either, for example, state
11 loan repayment program or higher reimbursement rates. And
12 we're doing it with a very strong consensus in the
13 community.

14 What actually happens, if you don't know, is we
15 proactively go out to the community, we call the community
16 and say we're going to be in your area and we want to see if
17 we can reconfigure your service area, and we call a number
18 of different players, whether they be clinics, hospitals,
19 board of supervisors, CEOs, anybody that's impacted by
20 healthcare workforce issues and funding, and bring them to
21 the table. We've got a real exciting software right now
22 called our GIS, Geographical Information System. Anyway,
23 the bottom line is that we're able to do realtime
24 configurations.

25 Just to let you know, my understanding is that the

1 last time LA was done, it took two years to do, this time it
2 took us six weeks. And I was very impressed because I'm not
3 a techie, but when I went down there and I saw what we were
4 able to do in LA. In fact, for the first meeting that I
5 went down there, I took a flak jacket because I was ready
6 for the fists to fly, you know. Because everybody has
7 issues in terms of wanting to have their particular service
8 area covered and understandably so. I've been in that
9 particular position. But when we saw what the GIS did, the
10 realtime numbers, and people saw there was no hidden agenda,
11 that we were being very straightforward in trying to help
12 different communities, and actually we were able to work it
13 out with a gentlemen's agreement and they were very
14 impressed. And we got some real good press from this.
15 We're in about 50 percent of the state. Fifty percent,
16 especially after doing LA. I think we've had difficulty in
17 one area, and the only reason we had difficulty in one area
18 is because a couple of the representatives of the community
19 didn't show up, and rather than move forward with a
20 recommendation and not enough participation, I decided to
21 cancel that and said, no, let's redo it again with more
22 players at the table. So it wasn't so much of a big
23 political thing, but rather it was not enough participation.
24 And we've always felt that without community participation,
25 you know, I'm not willing to make decisions for the

1 community in that sense. So we wanted them to be involved.

2 Under the Health Careers Training Program. This
3 program is very close to my heart in the sense that I've
4 been used to working with a lot of communities and working
5 in collaboration with communities. And I think, especially
6 as we move forward with continued budget deficits, this is
7 one particular way to handle a lot of issues. It's real
8 difficult sometimes to bring people to the table and say,
9 okay, rather than big government coming down and saying this
10 is what you need, we'll come down with the attitude that
11 says, okay, what are your needs in the community and how can
12 we help you.

13 Right now we have two collaboratives, one in
14 Fresno that I'm more closely tied to. And one of the nice
15 things there is that the Fresno collaboration, there are
16 some people in this room I'm certain that know about this.
17 You know, we've been able to come up with some reasonable
18 goals and objectives, because when you first start you have
19 a laundry list that's about a mile long, but knowing that
20 there's limited resources of time and staff, so we try to
21 narrow it down to a more realistic approach. And my job is
22 to go back to Sacramento and try to find the resources that
23 we have available at the state level to help the
24 communities. So we've got a staff person assigned to that
25 particular collaborative. We've got one assigned to one in

1 Sacramento. And in addition to that, even though they're
2 not formally put on paper, we have several other
3 collaboratives that we're providing to.

4 This one here is something that Bud alluded to.
5 When we're trying to find different ways to deal with a
6 budget deficit, one of the biggest areas that comes up is
7 the scope of practice. If you've got somebody in the
8 community that can do X number of steps in a particular area
9 of service, why isn't it that we can't try to extend their
10 scope of practice and see if they handle it with the proper
11 supervision. So this is a real exciting program for me too,
12 but unfortunately I don't think it's been utilized
13 appropriately, only because if you have the funding, you're
14 not going to worry about it. But now that we're in the
15 midst of a budget crunch, I think this program will probably
16 take off. And we're doing a couple of things right now.
17 We're trying to come up with a plan in terms of finding out
18 what can we do in the oral health care area.

19 So I'm real excited about that and I think the
20 CPCA is real excited about that because we have never
21 utilized it, and unfortunately, I don't think we've
22 advertised it enough, and I think that's our biggest
23 problem. It's not that the community doesn't want to do it,
24 but I don't think the community is aware. So that's our
25 flaw. We're looking to correct that and I'm offering it up

1 to you right now. If you have questions on this, please
2 feel free to ask me.

3 What I did initially when you come in, I brought
4 in some late summaries. Kerri already chewed me out about
5 that. But I brought some summaries about all the programs
6 that I'm talking about. It's got a little descriptor, it's
7 also got the name of the lead person on there, their phone
8 number, their e-mail, and the website. So if you have more
9 questions, please feel free to contact them. Our website is
10 not quite up to date, I will tell you that right now, so I
11 would rather that you contact the person. If you don't
12 contact the person or don't want to talk to them and you'd
13 like to talk to me, please feel free to do so, okay.

14 Okay. So we talked about what is the division
15 doing and why are you doing this, Pablo. Well, as I
16 mentioned to you, we lost what we call the CalSAMP,
17 California Shortage Area Matching Program, and the SAMEP,
18 Shortage Area Medical Education Program, which was a three-
19 year pilot project that was run by Dr. Bob Montoya. He did
20 a real good job, a very good job with the program, however
21 there was no continuation plan developed and we lost the
22 funding or the funding ended October of last year.

23 We learned some very hard lessons as a result of
24 this. And part of those lessons are not only applicable to
25 the CalSAMP and SAMEP programs, but they're also applicable

1 to a number of the programs within the Division. And some
2 of those lessons, I have a list of them and let me read them
3 off to you.

4 We learned first of all that we had a very poor
5 tracking mechanism. We didn't know where our clients came
6 from, our residents came from, our students came from. We
7 knew where they went, but we lost track once we placed them.
8 Our data collection was something less than to be desired.
9 We had it on a Word processing instead of an Excel or
10 Access, so that we could be a continuation with an
11 accumulation of numbers, again, in order to validate a
12 program. So we learned that lesson.

13 Through feedback from the community, we learned
14 that we need a little more structure in the programs.
15 Different sites were getting different portions of a
16 curriculum, if you will. That doesn't mean it was bad, but
17 we thought, God, what if we could standardize this and then
18 move this forward formalized in such that anybody who goes
19 through this program can get credit for it, i. e., the
20 students. So that was feedback that was given to us from
21 the community. It's not something that I came up with. I
22 wish I could tell you I came up with all the ideas, but I
23 didn't. It was community feedback.

24 We learned that we needed to add partners. We
25 were very LA-weighted and very based because of population,

1 which was okay, but there are other needs in the state. So
2 that's one of the other criticisms and constructive feedback
3 that we received, why just LA. So we're looking to expand
4 from what has typically been three basepoints of operation,
5 and I'm hoping that we can do eight. That's my goal, at
6 least for the next year or two years.

7 Also the other thing that was really stressed to
8 us was the fact that we were only including the docs and the
9 NPs and the PAs. And the comments that was made was Pablo,
10 you guys can take care of that issue, but if you don't have
11 clinicians, mental health clinicians, if you don't have
12 people who are able to develop and change policy, then all
13 you're doing is bandaidding stuff. So we needed to include
14 people who would be able to change policy down the road, so
15 we're adding different disciplines to the curriculum. So
16 again that's only for hopefully the resurgence of our SAMEP
17 program, but we're trying to do it across the board. A lot
18 of these programs cross over and the staff in our division
19 do not simply function in one area or the other, they cross
20 over into different areas. And our ideal goal is to have a
21 complete pipeline for people to go through the system.

22 Am I running out of time?

23 Okay. And here's the purpose. I'm just going to
24 run through the purpose real quickly. We're hoping to make
25 for a more seamless blend of programs. We want to focus on

1 having a wider range of ethnically and culturally diverse
2 population of professionals. We want to assist the students
3 in other words, we don't want students to struggle and ask
4 where they should start. We should be the facilitator of
5 that. We want to continue exploring in the area of
6 improving placements in medically underserved areas. And
7 obviously, we want to engage communities in more of this
8 process because they are the ones who have the information
9 for us.

10 And two things I'm very proud of in the division.
11 We developed what we call a Division Policy Advisory Team.
12 And what it is is we have the managers leading the
13 supervisors in the division, and every Monday we meet and
14 do, for those of you who are clinicians and that's what I
15 was in a previous life, is we do case consultation. We
16 bring our hardest, most difficult projects to the table and
17 via collected wisdom we try and make decisions before we
18 move anything forward in terms of a policy situation. It
19 also is a good checks and balance, because as you know, when
20 you get busy, you tend to forget certain projects. This is
21 a reminder. There is a lot of peer pressure. There is a
22 lot of peer support though, and we force each other's hand
23 on this particular process. So we come in and we open and
24 nonetheless we have some coffee and we sit down and
25 everybody is expected to participate, and we update our

1 things to do list as we go and that's the way we do the
2 process.

3 The last one is the Statewide Advisory Committee
4 which is not yet in its full development. I was talking to
5 Dr. Lawson just a moment ago. As a result of the lessons we
6 learned from our counseling in the SAMEP program, Dr.
7 Carlisle and Bud have approved for me to put together a
8 statewide advisory committee. This also came from community
9 feedback. What we're looking to do is put a committee
10 together that will help us, help OSHPD, forge some of its
11 policy in terms of programs and the direction we're going.
12 And I have to tell you right now the list of people that are
13 on this committee are impressive. We have everybody from
14 Mr. Braumbeck from UCSF, Dr. John Blossom, has agreed to
15 serve on the committee. We've got Dr. Laurie Williams, who
16 is a Native American Indian representative. There's not
17 been enough representation. We have the asian community is
18 going to be represented. We have Dr. David Hesbastista, Dr.
19 Hector Flores, Dr. Jaime Cruz, Dr. Cathy Flores, also here
20 in the valley. I mean we have a number of players who have
21 collected wisdom. I keep saying I feel like I'm in
22 kindergarten compared to these guys in terms of the
23 knowledge that they have relative to healthcare workforce.
24 So I'm very proud to know that these people are really going
25 to be -- I feel are going to be really challenging OSHPD to

1 meet the demands of what these people want. But I think
2 that's the best way to make public policy and the best way
3 to put the rest together if they're going to be affected by
4 the committee.

5 Accomplishments. This is the part I hate to do,
6 to present it to you. I hate tooting my own horn, so I will
7 toot the staff's horn, because it's the staff that's done
8 all the work. I've got some great staff.

9 This Healthcare Pathways Continuum, it seems like
10 a very simple concept, but it was actually a very, very
11 difficult thing to come up with. You had to really
12 restructure mindsets in terms of how you service and
13 learning. People were not used to crossing over. We are
14 trying to eliminate the silo concept within the division, so
15 that people from one cube to the next cube know exactly what
16 is going on. We're building up a backup system, because, as
17 you know, sometimes somebody goes on vacation or they're out
18 sick or whatever, and nobody has information. I don't like
19 that. I would like to know that the next cube could pick up
20 the phone and answer the questions. So that's what we're
21 trying to do.

22 When I first came on board, I understood that the
23 Song-Brown programs had not been monitored in several years.
24 I couldn't understand that, so what we did is we
25 standardized the Song-Brown and developed a monitoring tool

1 for two reasons. Number one is to make sure we were able to
2 evaluate the programs and see their effectiveness, and
3 number two, to make sure that in going out people knew that
4 we were rating them. And we did get this comment by the
5 way. We were rating them on the same scale. In other
6 words, so there was no differential treatment, everybody got
7 the same thing.

8 And then the third component that happens, we
9 actually got some very good feedback, was people kept saying
10 to us, gee, we didn't know if we were doing it right, but
11 nobody every questioned it, so I just kept doing what I was
12 doing. So we used that as a TNTA type of facilitation and
13 it turned out to be very positive.

14 I'm also asking the staff to develop a similar
15 project for our State Loan Repayment Program, which has also
16 again not been reviewed. I have a real tough time putting
17 up money, public money, and not knowing what's happening to
18 it. I don't like to have that uneasiness about it. Not
19 that there's not a trust level, but it's better to work
20 together than to work in the unknown.

21 I already talked about trying to work on the
22 redistribution of the funding for the State Loan Repayment
23 Program.

24 And then there's three Legislative-mandated
25 studies that we've done or we've provided technical

1 assistance on the implementation of AB 982. The department
2 actually got some very nice kudos. And we talked about the
3 MSSA Reconfiguration. And the other part that I'm real
4 proud of is we were able to attain a \$50,000 grant from
5 HRSA, even though the department is already working on a GIS
6 component for the whole department. With the \$50,000, we
7 were actually able to focus in specifically on healthcare
8 workforce issues, and the beauty of this, and it was done by
9 an independent contractor, and again, the evaluation was not
10 only done internally within the division, but they went out
11 and they talked to CBCA. I think they also talked to --
12 Laurie, did they talk to your group, the California State
13 Rural Health Association. They talked to DHS and others.
14 We talked to people who are going to be impacted by the
15 product that we were trying to produce. And I think that's
16 the beauty of working collectively in collaboration. So I'm
17 very proud of what we're doing so far in this area. And, of
18 course, we're involved in several other committees and
19 groups. The Racial and Ethnic Health Disparities
20 Participant, we're working with the Rural Health Access
21 Council, and there's quite a list of about half as more, but
22 because of time durations, I just want to keep it to those.

23 Kerri, wants to get me off the stage, and I
24 understand, but I thought it was important that you know
25 that -- she told me she was going to hook me. But just to

1 let you know, I'm very proud of where I work at, I really
2 am. I think we have a good direction. One of the things
3 that I do like is the fact that we try not to turn our backs
4 on people, in other words, we're user friendly. Hopefully
5 we're reachable. We're not perfect and we're willing to
6 listen to the public in terms of what your needs are, and
7 hopefully we can help you with that. So with that in mind,
8 I'll leave it to any questions that you may have.

9 CHAIRPERSON CARLISLE: We'll go ahead and thank
10 Pablo for an excellent presentation about his division.

11 (Applause.)

12 CHAIRPERSON CARLISLE: As OSHPD Director, I know
13 how lucky we are to have Pablo running the Workforce and
14 Community Development Division. I just want to thank him
15 for being available to serve in that capacity and thank him
16 for his accomplishments since taking over the division.

17 At this point I'll ask councilmembers or
18 representatives if they have any questions for Pablo Rosales
19 regarding his presentation.

20 Okay.

21 And before we go on to the public comment period,
22 let me say that if you do have questions that you want to
23 direct to Pablo, Bud, myself, or other councilmembers, you
24 can use these cards as a vehicle for producing the
25 questions. I know we've had some late arrivals. And again,

1 if you do wish to make a public comment or ask a question,
2 just go ahead and fill out one of the cards, which are
3 available at the back table, and we can collect them from
4 you. Raquel is raising her hand, and if you raise your hand
5 with a card, she'll go ahead and pick it up from you.

6 Before we go on the public comments, let me just
7 ask councilmembers if they have any updates from their
8 respective departments that they wish to share with members
9 of the audience at this point in time.

10 Ruben.

11 COUNCILMEMBER LOZANO: Yes. As Pablo mentioned,
12 recently the mental health program has been added to the
13 Loan Repayment Program, and we have gotten word out to the
14 counties as to this participation, where it's available for
15 them, and my guess is we will be hearing on that soon and
16 applications will follow.

17 CHAIRPERSON CARLISLE: Thank you.

18 Mauricio.

19 COUNCILMEMBER LEIVA: Just an update. Regarding
20 the budget, we have not received any information that we
21 normally had. The Healthy Families Program continues to
22 operate as it has in the past. In fact, the Governor has
23 provided us enough dollars to continue to move children into
24 the Healthy Families Program. We will be implementing
25 Assembly Bill 1401, which will streamline the movement of

1 people involved in the Major Risk Medical Insurance Program.
2 And that will help the process and in essence will make more
3 slots available to people who have preexisting conditions.

4 CHAIRPERSON CARLISLE: Thank you, Mauricio.

5 Elizabeth, anything from DHS?

6 COUNCILMEMBER SAVIANO: Well, I suppose probably
7 what's foremost on most people's minds given the events I
8 heard last night, is the status of the Smallpox Vaccine
9 Program and the bioterrorism money from the CDC. The
10 latter, I can't speak to specifics. I know that Tom Ridge,
11 from the federal Homeland Security spoke this morning to
12 announce that monies would be available to state and local
13 agencies to address some of the additional security needs
14 that are occurring at state and local levels.

15 The Smallpox Vaccine Program in California, as of
16 Tuesday, I understand that approximately 560 health workers
17 in California have been vaccinated. The vaccine has been
18 released to, I believe, 41 county and public health
19 agencies, that's not including LA, because LA had applied
20 for a separate vaccine program, and that there are at the
21 state level several hundred State DHS employees who have
22 volunteered to be vaccinated. Our Director, Leanna
23 Bumtaugh, was vaccinated immediately, and it's been a couple
24 weeks ago now.

25 And there is some question about whether or not

1 the second phase of the vaccines are going to be able to be
2 stepped up, particularly since we are now at war, and I
3 don't have any information about that. Phase Two would be
4 vaccination of first line responders, that would be higher
5 emergency and police force workers. So that we don't have
6 any information on at this point.

7 CHAIRPERSON CARLISLE: Thank you, Elizabeth.
8 And Maureen.

9 COUNCILMEMBER MCNEIL: I do have a couple of
10 items. We're going to be proposing to expand our Emergency
11 Medical Technician One scope of practice to include seven
12 new medications and one new procedure. One of the
13 medications I think will be of particular interest are Mark
14 One kits, and these are autoinjectors that are used to treat
15 emergency responders and patients who have been exposed to
16 some type of a bioterrorism attack. This proposal probably
17 will be issued in regulations sometime this summer.

18 Another project that we've been involved in is
19 obtaining a federal grant to purchase automatic external
20 defibrillators to distribute in rural areas. Rural areas
21 submit applications for this funding and our awards for the
22 funding has just gone out in a press release. We will be
23 provided 52 automatic external defibrillators to rural areas
24 via this grant process.

25 CHAIRPERSON CARLISLE: Thank you very much,

1 Maureen.

2 Well, at this point, it's a pleasure to move
3 forward to the public commentary period. And we have
4 several comments already that we will hear from. And again,
5 go ahead and submit cards if you wish to participate.

6 The first is from Ned Miller from Bloss Memorial
7 Medical Center.

8 Ned, go ahead and take it away.

9 MR. MILLER: Kerri said there's a microphone and
10 we should come up to that. So just a warning for everybody
11 else, I guess. You don't have to do that, but I think that
12 would be better.

13 I'm Ned Miller, the CEO of Bloss Memorial
14 Healthcare District in Atwater, California. I've come here
15 today just to talk about something that is in the process of
16 developing regarding population shifts based on the 2000
17 census, which we have been notified by the feds could affect
18 20 or more rural health clinics in California, ours being
19 three of those. In going back to Baltimore and talking with
20 the feds about this, they indicated that instead of a
21 hundred across the United States, perhaps 200, which means
22 perhaps in California more rural health clinics could face
23 possible deactivation as rural health clinics.

24 Based on the census and using federal standards,
25 we'll be no longer considered rural. Looking at our

1 populations, the unemployment rates, the minority situation,
2 the low payment to doctors for MediCal, which most of them
3 don't want, we certainly need to continue to exist. We'd
4 like you to help us intercede with the feds to find out what
5 their plan is. They said there would be some exemptions.
6 We have not heard yet what the exemptions will be. I don't
7 know if they plan to allow us to become FQIC lookalikes or
8 if they will go ahead with this exactly, but many of the
9 rural health clinics in the valley, particularly in the
10 central valley, feel very threatened by the potential of
11 losing their designation.

12 I know in talking with members from different
13 clinics, they feel very similar in their situation as ours.
14 I know in the Merced County area, we've lost 17 doctors from
15 what we had five years ago. Those doctors, most of them,
16 will not take MediCal. If our rural health clinics are
17 lost, these people, first of all, do not have the
18 transportation to travel far to get care, and secondly, when
19 they do get places, they will crowd up the emergency rooms
20 if the rural health clinics are lost.

21 So we do hope you will help us look into this with
22 the feds and see if they can change their definitions or see
23 if they will give the exemption to allow us to remain.
24 Thank you.

25 COUNCILMEMBER LEE Thank you, Ned.

1 I'll respond, it came under the Council's radar
2 and since I have an inside track in OSHPD, I think we can
3 work something out here. We're arranging for a briefing of
4 ourselves by members of this audience, actually, in more
5 detail of what this situation is. The way that we
6 understand it is the desires of the rural communities in
7 California would be rather than have to submit exemption
8 requests on a case-by-case basis, why doesn't the federal
9 government acknowledge the use of our geographic
10 configurations, and rather than adapt it to some
11 configuration that was developed in the state of Washington
12 that may well apply in other states. That's our
13 understanding. We're in the process of looking to see what
14 it is we can do on that, and we'd have to work with our own
15 Health and Human Services Agency, but that's something
16 that's well in progress.

17 MR. MILLER: Thank you.

18 CHAIRPERSON CARLISLE: Next we'll go ahead and
19 hear from Mr. Fred Johnson, who is the President of the
20 California State Rural Health Association.

21 Fred.

22 MR. JOHNSON: Good morning, Mr. Chairman, Members
23 of the Council. I'm very pleased to be here today.

24 I'd like to start off by thanking you for taking
25 time from your busy schedules to make the trip down here.

1 It's very important to us and to be here in conjunction with
2 the Rural Symposium. And I also wanted to thank you for
3 having a representative at the California State Rural Health
4 Association's Educational Workshop yesterday afternoon.

5 My name's Fred Johnson. I'm currently president
6 of the California State Rural Health Association, and a few
7 introductory remarks. I wanted to also thank you very much
8 for the handouts at the back of the room. The periodic
9 report from your Executive Director is most helpful and all
10 of the other information, including the grants timeline and
11 the jobs available information.

12 On a personal note, I would really like to commend
13 Dr. Carlisle and Bud Lee and Pablo Rosales for making a lot
14 of the changes that have been a long time coming at OSHPD.
15 And I think that it serves the people of California much
16 better. It's taken a lot of courage and it hasn't gone
17 unnoticed it's fair to say.

18 Today I have provided you with some written
19 testimony and requests, and the California State Rural
20 Health Association views the California Rural Health Policy
21 Council as our partners in the executive branch of the
22 California State Government. We hope that you will view the
23 California State Rural Health Association as your partners
24 on the private side.

25 And so it's kind of with that that we're going to

1 give you some requests today. These requests seek support
2 from federal and state activities which preserve and enhance
3 health in rural California, and that's the core mission of
4 our association. This happens to be the first time, I
5 believe, that the State Rural Health Association has ever
6 testified before your council, so please bear with me.

7 Also prior to the next public meeting, we would
8 very much appreciate to hear from you about the status of
9 each of the requests that we are making of your today.

10 CSRHA and rural communities appreciate and value
11 the important role your council and each councilmember here
12 today plays in our combined efforts to improve the health of
13 rural California.

14 Now, I will move into topics and requests. And
15 we've provided you with the issue, the request and a little
16 background. I wanted to say that we would be very pleased
17 to provide any additional information that the Council or
18 any of the members would like to receive or participate in
19 any way to help you as you deliberate with these requests.

20 The first request has to do with federal funding
21 concerns. I might as well hit the big one first. And our
22 request is it is requested that the California Rural Health
23 Policy Council send a letter to the appropriate federal
24 officials supporting federal funding levels as recommended
25 by the National Rural Health Association for federal fiscal

1 year 2004.

2 Topic Two under federal issues is the Medicaid
3 overhaul. It is requested that the California Rural Health
4 Policy Council identify the impact of the proposed Medicaid
5 or MediCal in California changes on rural California, and to
6 provide that information to Mr. Tom Stoley, Administrator of
7 Centers for MediCare and Medicaid Services; Governor Davis
8 and other officials as appropriate.

9 In the area of federal definitions issue, we are
10 requesting that the Rural Health Policy Council send a
11 letter to the federal Office of Rural Health Policy
12 requesting that California be exempted from the rural/urban
13 commuting areas methodology and that the federal government
14 accept and use the California Health Manpower Policy
15 Commission's and also this council's definition of rural as
16 administered by the California Office of Statewide Health
17 Planning and Development. The federal government just
18 doesn't understand what a rural area in California is and
19 OSHPD does.

20 Under state issues, I have a few. One is maybe a
21 little easier one. In the area of viewing healthcare in a
22 different light really is a source of economic stimulus,
23 we're requesting that your council annually, once a year,
24 conduct a joint public meeting with the California Rural
25 Development Council, which is located in the Trade and

1 Technology Commerce Agency, and also include the Governor's
2 Office of Planning and Research Rural Taskforce in that
3 public meeting. And really the goal would be to open up
4 communications to get economic development more keeping
5 healthcare on their spotlight and getting healthcare to
6 think more that we really do a lot of economic development.

7 The next area is in the area of workforce and
8 education. Just a comment and then the request. The
9 comment is that rural California suffers from an across-the-
10 board workforce shortage of physicians, mid-level
11 practitioners, allied professionals, dentists and dental
12 professionals, pharmacists, mental health professionals, and
13 other specialties. In the area of health education centers,
14 we request that this council support the development of new,
15 they call them AHECs, the Area Health Education Centers in
16 rural California, in rural areas of California.

17 The next topic is the J-1 Visa Waiver Program.
18 It's a federal program that was started a few years ago, of
19 which California has been participating. It is requested
20 that this council support California's continued
21 participation in the J-1 Visa Waiver Program should events
22 such as realignment change the current landscape.

23 The next issue under state is bioterrorism. And
24 it is requested that the California Rural Health Policy
25 Council, and particularly EMSA, support the inclusion of

1 rural officials in all urban evacuation planning activities
2 and that those urban agencies provide assistance to rural
3 areas whenever possible. Especially with bioterrorism,
4 there's a lot of planning going on and they're moving the
5 population out of the urban areas into the rural areas, but
6 they aren't including the rural folks at the table and those
7 discussions.

8 The last issue is the state budget and health
9 program cuts. And I know you're all in a difficult
10 situation and we're all challenged, but we couldn't end
11 today without requesting that the Council advocate for rural
12 health programs to be protected from being unfairly
13 disadvantaged in California's 2003/2004 state budget, as
14 rural communities lack economies of scale and only have
15 minimal resources and services to begin with.

16 Thank you very much. I'd be happy to field any
17 questions you might have.

18 CHAIRPERSON CARLISLE: Fred, thank you very much
19 for those comments.

20 Councilmembers, do you have any additional
21 comments or responses for Mr. Johnson?

22 Fred, thank you.

23 MR. JOHNSON: Thank you very much.

24 CHAIRPERSON CARLISLE: Next we have Deborah Page
25 from Delta Dental.

1 MS. PAGE: Hi, my name is Deborah Page and I'm the
2 Provider Relations/Provider Networks Coordinator for Delta
3 Dental State Government Programs.

4 I'm looking to the question on the status of the
5 Prop 10 Commission's project that we've heard about, and
6 because Delta not only is very active in Healthy Families,
7 but we've also been active in local, counties providing care
8 to low incomes in those counties. We just like to see what
9 else is out there and what the status is?

10 COUNCILMEMBER LEE: I think you may have caught me
11 a little off guard. I'm not quite that familiar with the
12 Prop 10 Commission Project.

13 COUNCILMEMBER LEIVA: Thank you for that question,
14 Ms. Page. At the March 5th meeting of the Medical Insurance
15 Board, they authorized us to enter into a contract agreement
16 with the California Children and Families Commission. They
17 are proposing a project which would target the children
18 under five, five and under, for special access to dental
19 care. We plan to have a proposal solicitation out in April.
20 And the project will be administered similar to the Rural
21 Health Administration Project. As you know, the Rural
22 Health Administration Project has been designated to be cut
23 in the next budget year. Although the Oral Health
24 Administration Project will not be the same as the Rural
25 Administration Project, they will be similar and we will be

1 using basically the same infrastructure where plans will
2 collect proposals from clinics, especially dental clinics,
3 that are interested in participating in the project.

4 CHAIRPERSON CARLISLE: Thank you, Mauricio.

5 Okay. The next comment is from David Green of the
6 Kern Valley Healthcare District.

7 David.

8 Again, I would encourage anyone to go ahead and
9 submit comments for the public discussion. Again, thank
10 you.

11 David.

12 MR. GREEN: Thank you. I'm David Green, the CEO
13 of Kern Valley Healthcare District.

14 I'd like to thank Bud for exactly a year ago, I
15 guess, that we took on a project and Bud helped some of us
16 come together to work with the Department of Managed Care in
17 getting some parity, I like to call it parity, in how we
18 deal with things. But given the unique situation with the
19 rural healthcare and the cost of maintaining that care there
20 and trying to keep it alive.

21 First I want to compliment you and appreciate what
22 you've done to help us in dealing with the Department of
23 Managed Care. The disappointment side though is we're still
24 working on that and I know you gave a report on it. My
25 question is in that comment regarding the regs that are

1 being drafted, a population of 500,000, the population of
2 500,000 or under, there are many of us and three of us that
3 were on that committee that are in counties of populations
4 greater than 500,000. For instance, Kern County has
5 600,000, but Bakersfield doesn't think there's anything east
6 of the mountain ranges which we're on the other side of.
7 And I think there's at least three of us on the other side
8 of those mountain ranges.

9 It's these kind of situations that we want to make
10 sure are addressed in that. Is there any way for us to make
11 sure that we don't get excluded in those considerations,
12 because there are some vast areas in those counties. Thank
13 you.

14 COUNCILMEMBER LEE: Thank you for reminding me of
15 how long we've been working.

16 (Laughter.)

17 COUNCILMEMBER LEE: I think what I'd like to
18 propose, David, is in conjunction with yourself and Ray and
19 Jim and others who have been with us all this period, in
20 conjunction with Sharon and anybody else in a similar
21 situation, I think it would be -- the best thing to do would
22 be for us to arrange a direct conversation between you who
23 are affected by this 500,000 population limit in a direct
24 discussion with the DMHC people who are going to be
25 responsible for that.

1 In just a very mild defense, they have lost some
2 leadership. Some of their leadership got promoted out of
3 the department, and so they are trying to recover from that
4 a little bit, which contributed to some of the delay over
5 the late last part of last year and early into this year.
6 But I think that perhaps, and so you wouldn't have to travel
7 all that way, I'm sure we can arrange some video
8 conferencing. I think through us we would be happy to put
9 that meeting together so that you can talk to them directly
10 and that we can help advocate for you within that executive
11 branch. And we would put that together as quickly as we
12 can, if that will work for you.

13 MR. GREEN: It sounds good.

14 CHAIRPERSON CARLISLE: Okay. Our next comment is
15 from Kathy Yarbrough of the Rural Health Design Consortium.

16 Kathy.

17 MR. YARBROUGH: I guess I'm the last speaker. I
18 want to thank you for this opportunity and to thank you for
19 the support that you've shown the Rural Health Design
20 Consortium this last couple years.

21 For those of you who don't know who we are, the
22 Rural Health Design Consortium was started several years ago
23 at the Summer Summit and it was a discussion held with an
24 architectural gentleman by the name of David Hitchcock and
25 some rural health administrators, and they were all

1 bemoaning over a couple cocktails the anxieties that were
2 being addressed to them by SB 1953, which I think some of
3 you might be familiar with.

4 What that conversation led to was several other
5 meetings, and we finally did bring together a group of 23
6 hospitals that had an interest in really looking at how we
7 could work as a group. Of that 23, 13 hospitals came
8 together and put together a group, and we had a wonderful
9 budget of \$60,000. We made that \$60,000 last for two and a
10 half years. It was a very interesting budget. Because this
11 group of 13 hospitals also did in kind and -- David
12 Hitchcock also provided lots of in kind.

13 And I guess I could go on and on about the Rural
14 Health Design Consortium, but I just want to say that we
15 started with an idea that we were going to work together to
16 design a core facility that we were going to use in all 13
17 communities. So we had this wonderful idea, we thought it
18 was a great idea, we thought everybody would just rush to
19 fund us. Well, not everybody rushed to fund us, and after
20 meeting on a monthly basis for about a year, what we came up
21 with was that really wasn't the best idea. But really what
22 the issue was was what needed to be in these rural
23 communities, what type of services made sense in rural
24 communities.

25 And one of the things we did was an OSHPD, we're

1 using an OSHPD study. And we looked at what type of
2 patients were being cared for in our rural communities, how
3 many of those patients were from the rural communities
4 themselves, what was really happening as far as care
5 delivery, and what we discovered very quickly is that rural
6 hospitals in the state of California care for almost 100
7 percent of the DRG statuses, and that was amazing to us.
8 Almost every hospital has done some sort of aortic aneurism
9 repair, and that's pretty scary when you start looking at
10 what is happening in some of these communities with the
11 facilities that do exist.

12 And so what we determined was we needed to change
13 our focus. We needed to look at what was appropriate, what
14 was reasonable, and what was sustainable. And when we did
15 that, we started changing our grant applications, we started
16 to get some interest. And our focus is still trying to come
17 up with a facility that would make sense in rural
18 communities.

19 We were very fortunate in getting -- as you all
20 know, every one of you sitting here has gone after grants.
21 We finally found a champion within the California Endowment
22 and we were able to have success. We did get a grant
23 recently of \$194,000. And that then led to a donation grant
24 basically from the California Health Collaborative to get to
25 \$200,000, which then tripped in a donation of \$50,000 from

1 Vega Healthcare Group. And so we have a quarter million
2 dollars to do our group, to do our study.

3 And one of the things that we did is our group,
4 everybody wanted to be the beta site, and so what we have
5 been hearing from the very beginning is that you're never
6 going to get hospital administrators to agree on anything.
7 They all have different issues, and they all need something,
8 and it's very difficult for them to think as a group. Well,
9 one of the things that we've been able to accomplish over
10 the last two years is to get hospital administrators that
11 have a little bit of a groupthink and they selected
12 Tehachapi to be the beta site for our group.

13 So what we will be doing and what we've already
14 started is working with Ray Heno and his group and community
15 advisory committee is that we are developing a replicable
16 community assessment process that other rural communities
17 can go forward and use in their communities to make sound
18 decisions on what should be there, and it has to be
19 community driven.

20 We've heard today from many groups talking about
21 the success of programs and the success of programs are
22 having the right people at the table and then engaging your
23 community in this process. So what we know is that we have
24 to be -- we have to really work at getting people involved.
25 What we know that we will be asking OSHPD and the Department

1 of Health Services is addressing some of the legislative
2 issues, as far as what is required of these facilities,
3 looking at licensing categories, and really looking and
4 thinking out of the box and coming up with something that
5 makes sense, is easy to build, is less expensive to build,
6 and can be built on a quicker basis.

7 So we're still looking at the building component,
8 but what we're really looking and focusing in on is getting
9 the community to understand they have to help and work very
10 closely with their health community, whether it's a hospital
11 or clinic or whoever in that particular community and doing
12 it from a position of making the community healthy.

13 So it's been an interesting process, I really
14 enjoyed the journey, and I know that we will be talking to
15 you on a regular basis as we go forward with this. So thank
16 you very much for this opportunity.

17 CHAIRPERSON CARLISLE: Kathy, thank you.

18 We also have a comment from Kevin Erich of Howard
19 Memorial Hospital.

20 Kevin.

21 MR. ERICH: Again, my name is Kevin Erich from
22 Howard Memorial Hospital in Willits, California. And just a
23 couple of comments. First of all, actually, a couple of
24 years ago I got up here and I said some things that I was
25 frustrated with, and I do want to thank Bud Carlisle and his

1 team, because they actually responded very quickly. And I
2 had some issues that seemed to be dragging on, and within
3 two weeks actually I got resolution to those issues.

4 So I'm not going to give you a whole list of
5 issues here, but I do want to -- and several things that
6 have happened over the last little while that are still some
7 issues of frustration. One of the primary ones for me is
8 with small projects and dealing with small projects and
9 getting the approval process on small projects, and how it
10 seems oftentimes those projects take just about as long as
11 some of the bigger projects to get the approvals for. And I
12 guess I would just strongly encourage the department to take
13 a look at ways we can -- you know, if projects, and I'm just
14 throwing out a number here, maybe less than \$20,000. You
15 know, maybe it's more appropriate to say \$10,000, I'm not
16 sure what's the best. But my suggestion would be for a less
17 than \$20,000 project to try to find a way that we can
18 actually within a month or at least 60 days get the
19 approvals that we need to be able to continue on and get
20 these projects accomplished and taken care of. That would
21 really be a plus, I think.

22 And Pablo's discussion earlier about how paperwork
23 is piling up, and I understand that some of the cutbacks at
24 the department and the inability to replace some of the
25 individuals in the department, you know, is just going to

1 make it worse and worse. So I think if you get paper on
2 your desk and off your desk faster the better.

3 (Laughter.)

4 MR. ERICH: So I would strongly suggest that you
5 take a look at that.

6 Also, I've been dealing with some seismic issues.
7 But I want to say that on the paperwork side it's been a
8 frustration at times to send paperwork back and forth, but I
9 actually went into the Sacramento office and met with the
10 individuals that were responsible for our project. And
11 actually that helped me a lot in understanding the process,
12 understanding what needed to be done, where we were and
13 actually Patrick Rogers and Chris Hokus, both of those
14 individuals I worked with, and actually I'm very thankful
15 for the help that they gave me. Even though it took me to
16 actually go to the office, it wasn't their fault, it's just
17 that the process, sometimes the bureaucratic process can be
18 really sort of a mess, as all of us know. And I appreciate
19 the help that they gave me in that process.

20 Another concern that I've had is it depends upon
21 the office that you deal with and the individuals even
22 within offices. But this is actually addressed at DHS. I
23 would sure like to see us work toward more of a consultive
24 supportive role, and at times I see that, but at other times
25 it seems like it's very disciplinary in nature route to get

1 you, we're going to get you one way or the other, or you
2 either do what we say or else you're in trouble. And that
3 is what the job is, I guess, of DHS is to survey us and make
4 sure that we're complying. But I know at times it's been
5 difficult when you get on the phone to try to ask for
6 information, the response basically has been we're not here
7 as consultants, we're here to basically survey you and to
8 make sure you're in compliance.

9 And to me that's rubbed me a little bit the wrong
10 way because I think we're in this process together, we need
11 to be working together for a common goal and a common
12 purpose, and I'd like to see the DHS department strongly
13 encourage its employees to try to be consultive in nature
14 and very supportive of the hospitals and try to help us find
15 solutions to some of these problems.

16 I come from a very small hospital, I don't have a
17 lot of resources, and you know it's very expensive also to
18 bring in outside consultants to come in and try to do some
19 of these things. And if the office could help us with some
20 of these processes or give us suggestions, I would sure
21 immensely appreciate that. And, again, this is not all
22 negative, because I have worked with some individuals from
23 DHS who have been very supportive and they have done that.
24 But there are others that have not. And I'm not going to be
25 listing names here, I don't think that's appropriate, but I

1 would just like to strongly encourage you to pass that on to
2 your employees that we would sure like to have more of a
3 supportive role and one of working to a common goal instead
4 of maybe against each other.

5 Thank you very much.

6 CHAIRPERSON CARLISLE: Kevin, thank you very much.

7 With regard to your project review comment, actually our
8 Facilities Division does sort of stratify between very big
9 projects and less than very big projects already. And I
10 hear the point that maybe we should also think about some
11 other stratifications to move things along. And so we'll
12 certainly take that comment back to the office and discuss
13 it and see if we can reach some sort of accommodation.
14 Thank you.

15 MR. ERICH: Thank you.

16 CHAIRPERSON CARLISLE: Any other responses to
17 Kevin?

18 Well, we have no other public comments submitted.
19 At this point we're approaching the close of the meeting. I
20 just want to on behalf of OSHPD, just make a little
21 advertisement. We have with us Dale Thorny. Dale is the
22 Deputy Director in charge of our Cal-Mortgage Program that
23 provides insurance to healthcare facilities to ensure loans
24 that they use for capital expansion and other projects, and
25 I just want to make sure that everyone knows who Dale is and

1 he's available to you if you wish to discuss facility
2 financing.

3 Dale, thank you very much.

4 Well, I think that we have actually reached the
5 end of the Rural Health Policy Council. I don't have much
6 in the way of closing remarks. I want to thank all of you
7 for being here. This is a very large attendance and it's
8 wonderful to be up in this part of California again.

9 Bud and I, and I think the other members of the
10 Council, will probably be available for a few minutes
11 afterwards if you want to come up and speak to us
12 individually.

13 But again, thank you very much everyone for being
14 here. I don't know the date for the next meeting at this
15 point, but we are looking forward to seeing you again in the
16 near future and certainly don't hesitate to contact us or
17 the office or the Council in the interim period.

18 Thank you.

19 (Thereupon the meeting of the Rural
20 Health Policy Council on March 20, 2003,
21 was concluded at 10:10 a.m.)
22

1 CERTIFICATE OF SHORTHAND REPORTER

2 I, MICHAEL J. MAC IVER, a Shorthand Reporter, do
3 hereby certify that I am a disinterested person herein; that
4 I reported the foregoing Rural Health Policy Council
5 proceedings in shorthand writing; that I thereafter caused
6 my shorthand writing to be transcribed into typewriting.

7 I further certify that I am not of counsel or
8 attorney for any of the parties to said Rural Health Policy
9 Council proceedings, or in any way interested in the outcome
10 of said Rural Health Policy Council proceedings.

11 IN WITNESS WHEREOF, I have hereunto set my hand
12 this 15th day of April 2003.
